

Anti-MRPL50 Polyclonal Antibody

Cat: K108128P

Summary:

【Product name】: Anti-MRPL50 antibody	【Source】: Rabbit
【Isotype】: IgG	【Species reactivity】: Human Mouse Rat
【Swiss Prot】: Q8N5N7	【Gene ID】: 54534
【Calculated】: MW:16/18kDa	
【Purification】: Affinity purification	
【Tested applications】: IHC	
【Recommended dilution】: IHC 1:50-200.	
【IHC Positive sample】: Human colorectal cancer	
【Subcellular location】: Cytoplasm	
【Immunogen】: Recombinant protein of human MRPL50	
【Storage】: Shipped at 4°C. Upon delivery aliquot and store at -20°C	

Background:

Mammalian mitochondrial ribosomal proteins are encoded by nuclear genes and help in protein synthesis within the mitochondrion. Mitochondrial ribosomes (mitoribosomes) consist of a small 28S subunit and a large 39S subunit. They have an estimated 75% protein to rRNA composition compared to prokaryotic ribosomes, where this ratio is reversed. Another difference between mammalian mitoribosomes and prokaryotic ribosomes is that the latter contain a 5S rRNA. Among different species, the proteins comprising the mitoribosome differ greatly in sequence, and sometimes in biochemical properties, which prevents easy recognition by sequence homology. This gene encodes a putative 39S subunit protein and belongs to the L47P ribosomal protein family. Pseudogenes corresponding to this gene are found on chromosomes 2p, 2q, 5p, and 10q.
